In 3D computer graphics, 3D modeling is the process of developing a mathematical coordinate-based representation of any surface of an object (inanimate or living) in three dimensions via specialized software by manipulating edges, vertices, and polygons in a simulated 3D space.. Three-dimensional (3D) models represent a physical body using a collection of points in 3D space, connected by ...

A conceptual model is a representation of a system. It consists of concepts used to help people know, understand, or simulate a subject the model represents. It is also a set of concepts. In contrast, physical models are physical objects, such as a toy model that may be assembled and made to work like the object it represents. The term may refer to models that are formed after a ...

3. Modeling rare diseases using iPSCs. Patient-specific iPSCs can differentiate into large numbers of affected cell types with the same genetic background as the patient since they are immortal and pluripotent (). Using these cells to construct rare disease models will prove highly useful in the discovery of effective and safe drugs and in the study of cell replacement therapies.

Here, we present a translational mathematical model dependent on three key parameters for describing efficacy of checkpoint inhibitors in human cancer: tumor growth rate (α), tumor-immune infiltration (Λ), and immunotherapy-mediated amplification of anti-tumor response (μ). The model was calibrated by fitting it to a compiled clinical tumor response dataset ($n = 189$ patients) obtained from ...

4.3. Non-Human Primate Models. Along with mouse models, non-human primates (NHPs) provide the most commonly used animal models for CHIKV research. They provide key benefits as compared to murine models: more closely matching human physiology and demonstrating similar clinical symptoms. Macaques are among the most commonly used NHPs.

Meta-analyses of randomized controlled trials (RCTs) have estimated a 13% reduction of cancer mortality by vitamin D supplementation among older adults. We evaluated if and to what extent similar effects might be expected from vitamin D fortification of foods. We reviewed the literature on RCTs assessing the impact of vitamin D supplementation on cancer mortality, on increases of vitamin D ...
