### A River In The Sky

Atmospheric rivers are relatively long, narrow regions in the atmosphere – like rivers in the sky – that transport most of the water vapor outside of the tropics. These columns of vapor move with the weather, carrying an amount of water vapor roughly equivalent to the average flow of water at the mouth of the Mississippi River.

When we think of our galaxy, the Milky Way, we usually picture something like the spectacular astral stream you see in photos such as this one. For many of us living where there is street lighting, it's not something that is easy to see for ourselves in the night sky. Perhaps there is some consolation in the fact that

"Giant rivers of water vapor in the sky with strong winds pushing them along." That's how Marty Ralph, a leading AR researcher and director of the Center for Western Weather and Water Extremes in La Jolla, describes them. A typical AR can be 300 miles wide, a mile deep and more than 1,000 miles long.
