Anesthesia for Spine Surgery

Introduction. In patients undergoing surgery for cervical spine myelopathy, anesthesia induction and endotracheal intubation can determinate systemic arterial hypotension that may worsen spinal cord hypoperfusion and can lead to neurological damage.[.] Several intubating devices have been proposed for the management of airways in patients with neurological conditions to minimize spinal cord ...

Effects of propofol or sevoflurane anesthesia induction on ...

Epidurals (spinal blocks), in which medication is administered in your back, are an example of regional anesthesia. Medication is delivered to cerebrospinal fluid through a fine needle to the spinal sac.

Types of Anesthesia Used During Surgery

The authors of the chapter on anesthesia for patients undergoing surgery for thorocolumbosacral spine deformity propose the use of intrathecal morphine prior to induction of anesthesia and note a very stable anesthetic course with a postoperative 12- to 18-hour pain-free interval.

Anesthesia for Surgery of the Spine : Anesthesia & Analgesia

In a retrospective study of 937 patients with spinal stenosis or lumbar disk disease, 207 of whom had previous spine surgery, the overall success rate of neuraxial anesthesia (spinal, epidural, and combined spinal-epidural [CSE] anesthesia) was 97%. 53 The authors showed that previous spine surgery did not affect the success rate or frequency of technical complications.
