A world-wide community of ARM developers in semiconductor and product design companies includes software developers, system designers and hardware developers. Over the last ten years, the ARM architecture has become one of the most pervasive architectures in the world, with more than 2 billion ARM-based processors embedded

in products ranging from cell phones to automotive braking systems.

The Cortex-M System Design Kit provides example AMBA systems to bring the designer to a point of a working system as

quickly as possible, offering a library of fundamental peripherals and interconnect software generation along with software drivers and examples. The example system architecture supports a number of configuration options.
