ASTM D2240 – Durometer hardness is a test method designed to test the depth of an indentation in the material being tested. The indentation is created by a given force on a standardized indentation head. The depth is proportional to the material hardness, also called Shore Hardness, its ductility and the shape of the indentation head.

Package cushioning is used to protect items during shipment. Vibration and impact shock during shipment and loading/unloading are controlled by cushioning to reduce the chance of product damage.. Cushioning is usually inside a shipping container such as a corrugated box. It is designed to absorb shock by crushing and deforming, and to dampen vibration, rather than transmitting the shock and ...
