Bisection Method Advantages And Disadvantages

Bisection method is bracketing method and starts with two initial guesses say x_0 and x_1 such that x_0 and x_1 brackets the root i.e. $f(x_0)f(x_1) < 0$. Bisection method is based on the fact that if $f(x)$ is real and continuous function, and for two initial guesses x_0 and x_1 brackets the root such that: $f(x_0)f(x_1) < 0$ then there exists atleast one root between x_0 and x_1 .
