Doppler blueshift is caused by movement of a source towards the observer. The term applies to any decrease in wavelength and increase in frequency caused by relative motion, even outside the visible spectrum. Only objects moving at near-relativistic speeds toward the observer are noticeably

bluer to the naked eye, but the wavelength of any reflected or emitted photon or other particle is ...

About Blueshift | Customer Data Platform Powered by AI

Blueshift definition is - the displacement of the spectrum of an approaching celestial body toward shorter wavelengths.

Blueshift | Definition of Blueshift by Merriam-Webster

Blueshift is a direct result of a property of an object's motion called the Doppler effect, though there are other phenomena that can also result in light becoming blueshifted. Here's how it works. Let's take that galaxy as an example again. It is emitting radiation in the form of light, x-rays, ultraviolet, infrared, radio, visible light, and so forth.

Blueshift (Kindle Edition) by Joshua Dalzelle It was an interesting read. The premise was rather stretched thin, but the author did make do. The characters were all rather one dimensional, until they each evolved in whatever fashion. The plot was driven by circumstance and characters, but really was an interesting journey.
