hold the crucible in place while pouring (you do not want it to fall out when it is full!) • The ring of the shank should fit just below the hip or widest point of the crucible. This will keep the crucible from falling through when carrying and is at the right balance/pivot point to make pouring metal the least difficult. fattest point shank

Use at least 2" of insulation around the chamber: The first inch or two should be Kaowool - the outer layer can be pearlite or vermiculite. Coat the inside surface with ITC-100, its well worth it. You will need about ½pt. for a typical minforge or a pint for a two burner forge.

### Gas Forges : Building Your First Gas Forge : anvilfire.com ...

A crucible is a metal container that you put inside of your furnace that holds the metal you’re melting. Put the metal you want to melt inside the crucible and use a pair of fire tongs to set it in the middle of your furnace. Allow the furnace to heat the crucible and melt the metal before taking it out with tongs for casting.
