Thinking about others in terms of their group memberships is known as social categorization—the natural cognitive process by which we place individuals into social groups. Social categorization occurs when we think of someone as a man (versus a woman), an old person (versus a young person), a Black person (versus an Asian or White person), and so on (Allport, 1954/1979).

Categorization is an activity that consists of putting things (objects, ideas, people) into categories (classes, types, index) based on their similarities or common criteria. It is sometimes considered synonymous with classification (cf., | Classification synonyms).Categorization and classification allow humans to organize things, objects, and ideas that exist around them and simplify their ...

Categorization - Wikipedia

For the cognitive process see: Classification (cognitive process). Categorization is the process in which ideas and objects are recognized, differentiated and understood.Categorization implies that objects are grouped into categories, usually for some specific purpose. Ideally, a category illuminates a relationship between the subjects and objects of knowledge.

Hence, two measures of differentiation can be compared for a single data set: one (GST) that makes use only of the allelic frequencies and the other (NST) for which similarities between the haplotypes are taken into account in addition. Tests are proposed to compare NST and GST with zero and with each other.

Tcf7 knock-down experiments and Gene Set Enrichment Analyses suggest that TCF7 plays a dual role in promoting the expression of genes characteristic of self-renewing CD34+ cells while repressing genes activated in partially differentiated CD34-state. Finally a network of up-regulated transcription factors of CD34+ cells was constructed.
