There are several types used depending on the age and make of your forklift. Many older forklifts use an electric solenoid shut-off that is connected to a vacuum switch or an oil pressure switch. This can be identified by an electrical wire attached to the solenoid. Be sure that you have 12 volt positive to the solenoid when the engine is cranking.

Engine Cranks Over But Doesn't Start | Forklift How-to ...

Turbocharger lag (turbo lag) is the time required to change power output in response to a throttle change, noticed as a hesitation or slowed throttle response when accelerating as compared to a naturally aspirated engine. This is due to the time needed for the exhaust system and turbocharger to generate the required boost which can also be referred to as spooling.
