In evolutionary biology, abiogenesis, or informally the origin of life (OoL), is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but an evolutionary process of ...

Anti-CCP antibodies have high specificity (90%) and sensitivity (about 77 to 86%) for RA and, like RF, predict a worse prognosis. RF and anti-CCP values do not fluctuate with disease activity. Anti-CCP antibodies are notably absent in patients with hepatitis C who may have a positive RF titer and joint swelling related to the viral infection.

Islet autoantibodies are proteins produced by the immune system that have been shown to be associated with type 1 diabetes. Testing can detect the presence of one or more of these autoantibodies in the blood.. Type 1 diabetes is a condition characterized by a lack of insulin due to autoimmune processes that destroy the insulin-producing beta cells in the pancreas.
