In physics and chemistry, a degree of freedom is an independent physical parameter in the formal description of the state of a physical system.The set of all states of a system is known as the system's phase space, and the degrees of freedom of the system are the dimensions of the phase space.. The location of a particle in three-dimensional space requires three position coordinates.

In the realm of Chemistry we often see many relations between the former and its relations to Physics. By utilizing both Chemistry and Physics we can get a better understanding for the both mentioned. We will use what we know about Ideal Gases and Thermodynamics to try to understand specific processes that occur in a system.
