**Engine Building - CarTechBooks**  
David Vizard's comprehensive computer program for cam selection was not duration-driven but over-lap driven. The event timing of the cam, directed by the duration of the intake and exhaust, together with the LCA and the advance/retard position in the engine. One the overlap to suit a given application is decided, everything else falls into place.

**Dynomation-6 Engine Simulation - Motion Software**  
A valvetrain or valve train is a mechanical system that controls the operation of the intake and exhaust valves in an internal combustion engine. The intake valves control the flow of air/fuel mixture (or air alone for direct-injected engines) into the combustion chamber, while the exhaust valves control the flow of spent exhaust gasses out of the combustion chamber once combustion is completed.

**Valvetrain - Wikipedia**  
The engine in this instance could well be described as a nitrous- assisted engine. The fact that the nitrous isn't giving its best is partially offset by the fact the engine, without it, is. ... Written by David Vizard and Posted with Permission of CarTechBooks. GET A DEAL ON THIS BOOK!
