While certain techniques categorize a document into two classes, negative and positive, others incorporate more sentiment classes (like the Amazon's five-star system) (Feldman, 2013). Sentence-level techniques attempt to determine the polarity of a single sentiment about a known entity expressed in a single sentence.

Historically, public opinion surveys have relied on the ability to adjust their datasets using a core set of demographics – sex, age, race and ethnicity, educational attainment, and geographic region – to correct any imbalances between the survey sample and the population. These are all variables that are correlated with a broad range of attitudes [...]
