Fire Engine Pump Testing Equipment

A fire pump is a part of a fire sprinkler system's water supply and powered by electric, diesel or steam. The pump intake is either connected to the public underground water supply piping, or a static water source (e.g., tank, reservoir, lake). The pump provides water flow at a higher pressure to the sprinkler system risers and hose standpipes. A fire pump is tested and listed for its use ...

Fire pump - Wikipedia

Every fire pump must be equipped with a metering device or fixed nozzles to accommodate pump testing. This equipment must be capable of water flow not less than 175% of rated pump capacity (NFPA 20-2013, Section 4.20.2.2).
