including ebooks, articles, magazines, and more. As of this writing, Library Genesis indexes close to 3 million ebooks and 60 million articles. It would take several lifetimes to consume everything on offer here.

Functional Anatomy Hollinshead

In this study the organization of networks in the human cerebrum was explored using resting-state functional connectivity MRI. Data from 1,000 subjects were registered using surface-based alignment. A clustering approach was employed to identify and replicate networks of functionally coupled regions across the cerebral cortex.

The organization of the human cerebral cortex estimated by ...

The sacroiliac joint (SIJ) is a synovial joint between ilium and the sacrum. It has little movement and its main function is to transfer weight between the axial and lower appendicular skeletons. The SI joint is symmetrical joint (i.e. is paired) with an oblique coronal orientation and is located at the S1-3 level 1-3.

Subacromial bursitis is a condition caused by inflammation of the bursa that separates the superior surface of the supraspinatus tendon (one of the four tendons of the rotator cuff) from the overlying coraco-acromial ligament, acromion, and coracoid (the acromial arch) and from the deep surface of the deltoid muscle. The subacromial bursa helps the motion of the supraspinatus tendon of the ...

Original Editor - Lina TaingJenna Fried. The shoulder - or better the shoulder girdle- consists of five joints. Three of them are considered as real. These three real joints are: the glenohumeral joint, the acromioclavicular joint and the sternoclavicular joint. Together with the subacromial joint and the scapulothoracic joint, the shoulder girdle reaches a large range of motion.
