Vibration and vibration isolation are both intimately connected with the phenomenon of resonance and simple harmonic motion. Simple Harmonic Motion External force, either from a one-time impulse or from a periodic force such as vibration, will cause the system to resonate as the spring alternately stores and imparts energy to the moving mass.

Vibration is the oscillatory motion of a body or structure. Vibration takes place when a body is displaced from its stable equilibrium position by a restoring force. A vibration system having a finite number of unknown variables is said to be discrete, while a system whose variables are functions of location as well as time is called continuous.
