10.1. Overview¶. Spatial analysis uses spatial information to extract new and additional meaning from GIS data. Usually spatial analysis is carried out using a GIS Application. GIS Applications normally have spatial analysis tools for feature statistics (e.g. how many vertices make up this polyline?) or geoprocessing such as feature buffering.

### 10. Vector Spatial Analysis (Buffers) — QGIS Documentation ...

Buffering in detail¶. Buffering usually creates two areas: one area that is within a specified distance to selected real world features and the other area that is beyond.The area that is within the specified distance is called the buffer zone.. A buffer zone is any area that serves the purpose of keeping real world features distant from one another. . Buffer zones are often set up to protect ...
