Gravity Where Do We Stand

Where do we stand? Pierre Binétry recaps what was learned about gravity in the first week. ... We have seen the theory of gravity developing over centuries, starting with Galileo, who identified the universality of free fall. Then we have Isaac Newton, who gave us the law of gravity, law that applies to any material body, whether on earth or ...

It shows how the quest for a deeper understanding, which would possibly incorporate gravity in the quantum realm, is more than ever an open field. The majority of the contributions deals with the manifold facets of "experimental gravitation", but the book goes beyond this and covers a broad range of subjects from the foundations of gravitational theories to astrophysics and cosmology.

Following this is a set of chapters describing the most recent experiments, techniques and observations on the testing of gravity theories in the laboratory, around the Earth and in the Solar System. The second part is dedicated to astrophysical topics deeply linked with the study of gravitation, namely binary pulsars and the perspective of direct detection of gravitational waves.

So what do we know about gravity? We know that it causes any two objects in the universe to be drawn to one another. We know that gravity assisted in forming the universe, that it keeps the moon in orbit around the Earth, and that it can be harnessed for more mundane applications like gravity-powered motors or gravity-powered lamps.. As for the science behind the action, we know that Isaac ...
