Defining Leaky Gut Syndrome: Common Symptoms and the ...

The human digestive system is a complex series of organs and glands that processes food. In order to use the food we eat as energy, our body has to break the food down into smaller molecules that it can process; it also has to excrete (or get rid of) waste. Most of the digestive organs (like the stomach and intestines) are tube-like and contain the food as it makes its way through the body.
