(a) GaAs-AlGaAs heterojunction bipolar transistors. The first HBT fabricated from Iii-V materials was based on the GaAs system (Woodall et al. 1972, Asbeck et al. 1981) The advantage of this Iii-V system is that the compounds that are used to form the HBT have a very small difference in lattice constant (0.6%). This makes epitaxial growth of the base and emitter layers relatively easy.

5.2.8 Other Types of Bipolar Transistors. Heterojunction bipolar transistors (HBTs) show excellent high-frequency behavior and are in many respects superior to BJTs. Conventionally, HBTs have been fabricated in Iii-V materials such as GaAs ( Ali and Gupta, 1991 ); major applications of those HBTs are power amplifiers.
