The autism spectrum is an umbrella term covering a range of neurodevelopmental conditions referred to as autism spectrum disorder (ASD). The word spectrum is defined in the Diagnostic and Statistical Manual of Mental Disorders to cover a wider group of conditions and differences in the type and perceived severity of symptoms, a trend which developed in the 1980s; an alternative term, autism ...

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

The heat front propagating through the graphene layers can be explained by two components: the plane-wave heat front and the radial heat wave . The thermal conductivity from the plane-wave heat front can be expressed as $K = (L / 2 S) (\Delta P / \Delta T)$, where $\Delta P / \Delta T$ indicates the heating power change with respect to the temperature change ...

The first issue is the limited scope of a 1D spectrum. A 2D NMR spectrum can be used to resolve peaks in a 1D spectrum and remove any overlap present. With a 1D spectrum, this is typically performed using an NMR with higher field strength, but there is a limit to the resolution of peaks that can be obtained.

The relatively smaller PCE for (CH 3 NH 3) 2 AgAlBr 6 compared to the rest is probable due to the smaller overlap of the absorption spectrum and solar-energy spectrum as shown in Figure 5a. Though the intrusion still evokes more heat than light, the philosophy of science is today the field in which the impact of the history of science is most apparent. Feyerabend, Hanson, Hesse, and Kuhn have all recently insisted on the inappropriateness of the traditional philosopher's ideal image of science, and in search of an alternative ...

The electronic absorption spectrum of β -carotene (β -Car) is studied using quantum chemistry and quantum dynamics simulations. Vibrational normal modes were computed in optimized geometries of the electronic ground state S_0 and the optically bright excited S_2 state using the time-dependent density functional theory. By expressing the S_2 -state normal modes in terms of the ground-state modes ...
