con la excepción de la primera parte del duodeno.

## Tracto gastrointestinal - Wikipedia, la enciclopedia libre

El tracto gastrointestinal (TGI) es el sistema de órganos que permite la ingestión de alimentos, su digestión y la absorción de nutrientes. Incluye la boca, el esófago, el estómago, el intestino delgado y el intestino grueso. El TGI también incluye los órganos que producen y liberan enzimas digestivas, como el páncreas y las glándulas salivales.

## eritrocitos (rojos) - Wikipedia

Los eritrocitos, o glóbulos rojos, son las células sanguíneas responsables por el transporte de oxígeno y dióxido de carbono por todo el cuerpo mediante la hemoglobina. La hemoglobina es una proteína globular dentro de los eritrocitos capaz de unirse y transportar varios gases, entre ellos el óxido nítrico (NO), pero su función principal es transportar el oxígeno y el dióxido de ...
