## **An Inventor In The Garden Of Eden|E**

Maglev (from magnetic levitation) is a system of train transportation that uses two sets of magnets: one set to repel and push the train up off the track, and another set to move the elevated train ahead, taking advantage of the lack of friction. Along certain "medium-range" routes (usually 320 to 640 km/h (200 to 400 mph)), maglev can compete favourably with high-speed rail and airplanes.
