In this article, I show you how to how to use Jackson-databind API for binding Java Object to JSON and JSON data to Java Object. This is a common task for Java developers to convert JSON to Java objects and vice-versa so I show you how to do that with examples.

Jackson - Convert Java Object to/from JSON Example

In this above example, we no need to register a JDBC driver because since Java 1.6 and JDBC 4.0 API, it provides a new feature to discover java.sql.Driver automatically, it means the Class.forName is no longer required. Just put any JDBC 4.x driver in the project classpath, and Java is able to detect it.
