FIG. 2: Factors affecting point-of-care testing results. A host of preanalytical, analytical, and postanalytical variables can impact the quality of a point-of-care result. Since point-of-care testing is meant for rapid analysis, most POCT devices utilize whole blood or other types of specimens that do not require extensive processing.

Management of point-of-care testing

Rapid technological innovations over the past few years have led to dramatic changes in today's mobile phone technology. While such changes can improve the quality of life of its users, problematic mobile phone use can result in its users experiencing a range of negative outcomes such as anxiety or, in some cases, engagement in unsafe behaviors with serious health and safety implications such ...

Bacteria present a promising delivery system for treating human diseases. Here, we engineered the genome-reduced human lung pathogen Mycoplasma pneumoniae as a live biotherapeutic to treat biofilm-associated bacterial infections. This strain has a unique genetic code, which hinders gene transfer to most other bacterial genera, and it lacks a cell wall, which allows it to express proteins that ...
