Kin Recognition By Cambridge University

Kin selection is the evolutionary strategy that favours the reproductive success of an organism's relatives, even at a cost to the organism's own survival and reproduction. Kin altruism can look like altruistic behaviour whose evolution is driven by kin selection. Kin selection is an instance of inclusive fitness, which combines the number of offspring produced with the number an individual ...

PATERNAL | meaning in the Cambridge English Dictionary

In evolutionary biology, an organism is said to behave altruistically when its behaviour benefits other organisms, at a cost to itself. The costs and benefits are measured in terms of reproductive fitness, or expected number of offspring. So by behaving altruistically, an organism reduces the number of offspring it is likely to produce itself, but boosts the number that other organisms are ...

The 'struggle for recognition' is fast becoming the paradigmatic form of political conflict in the late twentieth century. Demands for 'recognition of difference' fuel struggles of groups mobilized under the banners of nationality, ethnicity, 'race', gender, and sexuality. In these 'post-socialist' conflicts, group identity supplants class interest as . . .
