The kernel of L is a linear subspace of the domain V . In the linear map $L : V \rightarrow W$, two elements of V have the same image in W if and only if their difference lies in the kernel of L : $= =$. From this, it follows that the image of L is isomorphic to the quotient of V by the kernel: $/ ()$. In the case where V is finite-dimensional, this implies the rank-nullity theorem:

In mathematics, a system of linear equations (or linear system) is a collection of one or more linear equations involving the same set of variables. For example, $+ = + = + =$ is a system of three equations in the three variables x, y, z . A solution to a linear system is an assignment of values to the variables such that all the equations are simultaneously satisfied.
