Maintenance And Refactoring Of Information

Motivation. Refactoring is usually motivated by noticing a code smell. For example, the method at hand may be very long, or it may be a near duplicate of another nearby method. Once recognized, such problems can be addressed by refactoring the source code, or transforming it into a new form that behaves the same as before but that no longer "smells".. For a long routine, one or more smaller ...

Code refactoring - Wikipedia

refactoring improves objective attributes of code (length, duplication, coupling and cohesion, cyclomatic complexity) that correlate with ease of maintenance refactoring helps code understanding refactoring encourages each developer to think about and understand design decisions, in particular in the context of collective ownership / collective ...

What is Refactoring? | Agile Alliance

Software maintenance in software engineering is the modification of a software product after delivery to correct faults, to improve performance or other attributes.. A common perception of maintenance is that it merely involves fixing defects.However, one study indicated that over 80% of maintenance effort is used for non-corrective actions. This perception is perpetuated by users submitting ...

Software maintenance - Wikipedia

Code refactoring helps to improve the more objective attributes of code such as code length, code duplication, and coupling and cohesion, all of which correlate with ease of code maintenance. Code that is easier to maintain takes less time to maintain and often results in a codebase that functions properly.
