The tables below give equations for the deflection, slope, shear, and moment along straight beams for different end conditions and loadings. You can find comprehensive tables in references such as Gere, Lindeburg, and Shigley.However, the tables below cover most of the common cases.

Beam Deflection Tables | MechaniCalc

In engineering, deflection is the degree to which a structural element is displaced under a load (due to its deformation).It may refer to an angle or a distance. The deflection distance of a member under a load can be calculated by integrating the function that mathematically describes the slope of the deflected shape of the member under that load.
