Independent Global Specialty Chemical Company - Pilot Chemical

Tempering is the reheating of the part to a temperature well below the hardening temperature to reduce the hardness and increase the toughness. This may range from 350°F to as high as 1350°F depending on the steel and the hardness desired. On very hard critical parts double tempering (doing more than once) is recommended.

Heat Treating Steel - Hardening and Tempering ...

The first step was to figure out the parameters of my tube bender and you will have to fo the same for yours. In essence, this consists of doing a 90deg test bend (as explained in detail on the video series linked above), marking 1" gradations and marking the bend at 10 deg increments until you hit 90 deg.

How MIG welders work. A MIG (metal inert gas) welder is a kind of arc welder, and all arc welders use the same basic principle: an electrical current is passed between two electrodes, causing a short circuit across the gap between them. This short circuit, or arc, can be anywhere from 5,000° F to 40,000° F, so it melts metal very effectively.

A DSLR Is Better Than a Smartphone . Dedicated cameras have a lot of versatility and will likely always be able to do things that a smartphone can't. For instance, you can't attach a 200mm telephoto lens to your smartphone, and even if you could, you would probably look kind of ridiculous doing it.

Is the Best Smartphone Camera Better Than a DSLR? - FeltMagnet

If your pump is submersible, special wire is sold to go from outside your home, down into the well and to your pump. The gauge of this wire is at least 14. I'm not sure of the size exactly, but there's only one kind of wire sold for going doing into a well.
