The facial nerve and other cranial nerves are often at risk during otologic and skull base surgery. Our intraoperative NIM ® Nerve Monitoring Systems enable surgeons to identify and confirm motor nerve function and monitor major motor nerves during otology, neurotology, and skull base surgeries, as well as other procedures. The NIM Systems may provide visual and audible warnings if there is a change in nerve function, helping reduce the risk of nerve damage during surgery.

In general, otologic and neurotologic surgery is quite different from most other surgical disciplines. It typically requires a very unique set-up in the operating room and a special set of instruments. Also, practically every otologic procedure is performed using the surgical microscope and selective cranial nerve monitoring.
