The IBM System/390 is the discontinued fifth generation of the System/360 instruction set architecture.The first ESA/390 computer was the Enterprise System/9000 (ES/9000) family, which were introduced in 1990. These were followed by the 9672 CMOS System/390 mainframe family in the mid-1990s. These systems followed the IBM 3090, with over a decade of follow-ons.

IBM System/390 - Wikipedia

A railroad switch (AE), turnout, or [set of] points (BE) is a mechanical installation enabling railway trains to be guided from one track to another, such as at a railway junction or where a spur or siding branches off.. A switch (points) consist of a pair of linked tapering rails, known as points (switch rails or point blades), lying between the diverging outer rails (the stock rails).

Railroad switch - Wikipedia

In addition, operation commands can be input send set using various communication methods to meet the need of a wide range of available Network Solutions. Available Network Solutions. 1. I/O - Allows the driver to be connected directly to a controller or PLC to configure the operating system with I/O. 2.

Conveyor System - Motion Control Application

Maintains continuous operation without using battery power during brownout/undervoltage conditions down to 125VAC (at : 50% load). Below this point, output is maintained utilizing reserve battery powerHigh Voltage Transfer to Battery Power (Setpoint) Maintains continuous operation without using battery power during overvoltages to 275VAC.
