I have a 2012 Peterbilt 388 with a ISX 11.9. When you open the door the tail lights light up real dim, shut the door and the lights go out. If I turn on the key and shut the door, the lights stay on. Did some testing and found out its the turn signal wires that are getting power. They have 8 1/2 volts when the key is on or when the door is open.

Signals feed. Hot wire from the flasher 1 and it should blink underload, but not with a test light or DVM. In other words using a test light the flasher wire should be powered steady. All the rest of the switch is switchable. You should also get a hot wire when the brake pedal is pushed. Check for power at the brake switch, key off.
