Your vehicle consists of an impressive array of parts and components. It also relies on an electrical system for power. To some, this system can be complicated, especially if you find yourself needing to make repairs. If an area of your vehicle isn't properly getting power from the battery, you may need to replace the wiring.

Without it, the electrons would merely flow through the battery from the anode to the cathode. Because the electrolyte prevents this, electrons must flow out of the anode and through your motorcycle's electrical system, traveling through a circuit to the cathode and providing current (the flow of electricity) to your bike.
