### Basic Calculus - Department of Education

In calculus, the constant of integration, often denoted by  $C$ , is a constant term added to an antiderivative of a function  $f(x)$  to indicate that the indefinite integral of  $f(x)$  (i.e., the set of all antiderivatives of  $f(x)$ ), on a connected domain, is only defined up to an additive constant. This constant expresses an ambiguity inherent in the construction of antiderivatives.

### Constant of integration - Wikipedia

In calculus, an antiderivative, inverse derivative, primitive function, primitive integral or indefinite integral of a function  $f$  is a differentiable function  $F$  whose derivative is equal to the original function  $f$ . This can be stated symbolically as  $F' = f$ . The process of solving for antiderivatives is called antidifferentiation (or indefinite integration), and its opposite operation is called ...
