Differential calculus is a subfield of calculus concerned with the study of the rates at which quantities change. It is one of the two traditional divisions of calculus, the other being integral calculus, the study of the area beneath a curve. Differential equation is a mathematical equation that relates some function with its derivatives. In ...

Glossary of calculus - Wikipedia

Calculus, known in its early history as infinitesimal calculus, is a mathematical discipline focused on limits, continuity, derivatives, integrals, and infinite series. Isaac Newton and Gottfried Wilhelm Leibniz independently developed the theory of infinitesimal calculus in the later 17th century. By the end of the 17th century, both Leibniz and Newton claimed that the other had stolen his ...

Gaussian Quadrature. Seeks to obtain the best numerical estimate of an integral by picking optimal abscissas at which to evaluate the function. The fundamental theorem of Gaussian quadrature states that the optimal abscissas of the n -point Gaussian quadrature formulas are precisely the roots of the orthogonal polynomial for the same interval and weighting function.

A one sided limit is the value a function approaches as the x -value(s) approach the limit from one side only. For example, limits from above (also called limit from the right) or limits from below (also called limit from the left). Why would we want to calculate the limit for one side only instead of from both sides? Because for some points it isn't possible to find intervals on both sides ...
