In electronics, noise temperature is one way of expressing the level of available noise power introduced by a component or source. The power spectral density of the noise is expressed in terms of the temperature (in kelvins) that would produce that level of Johnson-Nyquist noise, thus: = where: is the noise power (in W, watts) is the total bandwidth (Hz, hertz) over which that noise power is ...

Die Quantisierung ist in der digitalen Signalverarbeitung eine Abbildung, die bei der Digitalisierung von Analogsignalen und zur Komprimierung von Bildern und Videos verwendet wird. Die dabei entstehende Abweichung wird Quantisierungsabweichung genannt.. Eine elektronische Komponente oder eine Funktion, die diese Abbildung eines Wertes oder eines Signals ausführt, heißt Quantisierer

Quantisierung (Signalverarbeitung) - Wikipedia

Allgemein. Unter einem System versteht man in der Systemtheorie abstrakt einen Vorgang, der ein Signal umwandelt bzw. überträgt. Das ihm zugeführte Signal wird dann Eingangssignal genannt und das entstehende Signal Ausgangssignal.Wie das Signal umgewandelt wird bzw. wie diese beiden Signale im Verhältnis zueinander stehen, wird durch die Übertragungsfunktion mathematisch beschrieben.
