A probabilistic analysis was given by Agrawal and Lo † with results that compare closely with Monte Carlo simulations for both short and long arrays and for low and high probabilities. The results are in terms of array length L/λ and a parameter, α , which is number of elements times power sidelobe level: $\alpha = N \times SLL$.

It is common for a probabilistic safety analysis to detect weak points of the plant where the normal design process had not been able to reveal weaknesses. This, in particular, happens for support systems of primary safety systems, for example the space cooling systems for rooms where the safety injection pumps are located.

The problem of cancer risk analysis is of great importance to health-service providers and medical researchers. In this study, we propose a novel Artificial Neural Network (ANN) algorithm based on the probabilistic framework, which aims to investigate patient patterns associated with their disease development. Compared to the traditional ANN where input features are directly extracted from raw ...
