Problems related to respiratory secretions can be caused by infection or aspiration, or by pooling of normal oropharyngeal secretions in a patient who is weak or unable to swallow or cough effectively (for instance in motor neurone disease) or who has a reduced state of consciousness. The latter situation is common as death approaches ('death rattle').

Pulmonary hygiene, formerly referred to as pulmonary toilet, is a set of methods used to clear mucus and secretions from the airways. The word pulmonary refers to the lungs. The word toilet, related to the French toilette, refers to body care and hygiene; this root is used in words such as toiletry that also relate to cleansing.. Respiratory health (pulmonary hygiene) depends on consistent ...
