## **Renal And Adrenal Tumors Pathology**

Patients with adrenal metastases tend to have large primary  
renal tumors that nearly encompass the entire kidney. Adrenal  
metastases result from direct extension of the renal tumor,  
lymphatic spread from involved retroperitoneal nodes,  
retrograde venous embolization and local vascular spread  
through vessels within Gerota's fascia.

Benign adrenal tumors are noncancerous masses that form in the adrenal glands. As part of your endocrine system, the adrenal glands produce hormones that give instructions to nearly every organ and tissue in your body. You have two adrenal glands, one located above each kidney. Each gland contains two tissue types: the cortex and the medulla.

The description of morphological structures forms the basis for understanding and recognising pathology of the kidneys and adrenals. The contents of pathological morphology could be extended, as we are of the opinion that the detection and therapy of renal and adrenal tumors are derived from different areas of diagnostic science.

Adrenal adenomas often make aldosterone, but adrenal cancers rarely do. Symptoms caused by a large adrenal cancer pressing on nearby organs. As an adrenal cancer grows, it presses on nearby organs and tissues. This may cause pain near the tumor, a feeling of fullness in the abdomen, or trouble eating because of a feeling of filling up easily.

Types Of Adrenal Gland Tumor. The adrenal gland tumor is basically classified as benign and malignant. The benign tumors

are masses that are non-cancerous in nature. It can affect the endocrine function adversely. So, it interferes with the hormone production by the adrenal glands.

### **Adrenal Gland Tumor: Causes, Picture, Symptoms, and Treatment**

Corticomedullary mixed tumors of the adrenal gland are quite rare, with only five well-documented cases reported in the literature.(1-4) Herein, we report the light microscopic and immunohistochemical features of two cases of this rare tumor. Patient 1 is a 34-year-old woman who presented with hyper ...

Adrenal incidentalomas are common and seen in about 3% of abdominal CT's, increasing up to 10% in elderly patients [1,2,3].The issue is to differentiate benign adrenal tumors from metastases or primary malignant masses without unnecessarily

exposing the majority of patients to the burden of clinical workup, interventions and imaging follow-up.
