structure (on the OH-58D only) with an Electronic Crash Sensor Unit (ECSU). The CABS system was developed by the United States Army Aviation Applied Technology Directorate, through a contract with Simula Safety Systems (now BAE Systems).

### **Airbag - Wikipedia**

Advanced frontal air bags are designed to meet the needs of the occupant in a variety of specific crash situations. Depending on design, advanced frontal air bag systems automatically determine if and with what level of power the driver frontal air bag and the passenger frontal air bag will inflate. The appropriate level of power is based upon sensor inputs that can typically detect: 1) occupant size, 2) seat position, 3) seat belt use of the occupant, and 4) crash severity.

### **Advanced Frontal Air Bags - Home | Safercar**

Airdeck is a fall arrest system utilising an inflatable air cushion, designed to protect operatives working at first-floor joist level. AirDeck comprises of an inner liner which is inflated and an outer protective bag made from woven polypropylene. The upper face is made from a double layer to provide additional protection from accidental damage.
