Staircase Structural Design And Analysis

Free standing staircase structures are complex in analysis and design, but with finite element analysis packages, simple solutions can be easily obtained as shown in this post. In this post, we are going to compare the results obtained with Staad Pro software with result from manual analysis using the method proposed on Table 175, Reynolds and Steedman, 2005 .

Staircases is divided into five chapters: Specifications and basic data on staircases; Structural analysis of staircases – Classical methods; Structural analysis of staircases – Modern methods; Staircases and their analysis – A comparative study; Design analysis and structural detailing. Charts and graphs are included and numerous design examples are given of freestanding and other geometric staircases and of their elements and components.

10 CHAPTER 10: STAIRCASES

How to draw a detailed stair plan: 1. Number each of the steps starting from the lowest 2. Indicate all the dimensions like tread widths & depths, total length & width of the stair, balustrade details etc. 3. Specify all the different types of materials.

STAIRS Design & Construction

STAIRCASE DESIGN. STAIRCASE. •The structural members which provide vertical movement (circulation) between floors of the building at different vertical levels. •The stairs of RC buildings may be designed by using various materials (wood, steel, RC, etc.). •The idealization of support conditions of the stairs may not be straightforward as in other parts of the building.

Perhaps the most critical structural issue of wood-framed stair construction is the connection of the stair stringer to the supporting structure. More often than not, the lower end of a set of stringers is in direct bearing contact with its supporting structure and issues tend not to arise.

Hello, Looking at your section, you can design your stair and landing as simply supported(pls. see attached). Regarding, the reduced depth on the support of landing,you can ignore that since the half-joint support is located below(if it is located on the upper portion, that's another issue and you need to check the adequacy of the reduced depth),provided you have a minimum ,ie, 100mm bearing ...
