Strong acids completely dissociate into their ions in water, while weak acids only partially dissociate. There are only a few (7) strong acids, so many people choose to memorize them. All the other acids are weak. The strong acids are hydrochloric acid, nitric acid, sulfuric acid, hydrobromic acid, hydroiodic acid, perchloric acid, and chloric acid.

The key difference between weak and strong acid is that weak acids ionize partially in water whereas strong acids ionize completely.. The strength of an acid is its ability to ionize or donate the hydrogen ion in an aqueous solution reacting with water. The more an acid ionizes, the stronger it is, and the less production of hydrogen ions indicates a

Answers

Strong acids and bases would be stronger electrolytes because they produce more ions in solution than weak acids and bases. To compare two strong acids or two strong bases, one would compare the K_a and K_b values to determine which would be a stronger electrolyte. The larger the K value the stronger the electrolyte. 8) Write the
