dogfish shark with its body cavity slit. The shark specimen in the photographs was prepared by turning it ventral side up and making a mid-ventral incision just anterior to the cloacal opening. It was cut in an anterior direction slightly to the right of the mid-ventral line. This cut was continued all the way to the pectoral girdle.

The vessels in this shark dissection specimen are double injected with red (arteries) and yellow (hepatic) latex. The dogfish shark species is *Squalus acanthias*. Please note that the tail of shark specimens is partially cut through and folded over to facilitate injection and shipping. Occasionally specimens may be 1-2" shorter than specified due to limited product
